-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14-17, 20-22, 25-27, 31 and 32 are rejected under 35 U.S.C. 102(e) as being anticipated by Ning (6480565). Ning teaches computer tomography comprising rotating gantry 206 supporting cone beam x-ray source 210 and flat panel detector 208, motor 212 for rotating gantry 206, motor 214 for vertically moving gantry 206 along the rotation axis A, motor 216 for moving detector 208, computer 302 including disk memory 218, x-ray control 326 controlled by computer 302 on gantry 206 and gantry control 324 controlled by computer 302 on gantry 206.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 18, 19, 23, 24 and 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ning as above. In Ning's system the 3d images are ultimately formed by offboard host computer 306 rather than by gantry computer 302, but it would have been obvious to generate said images by computer 302 in order to shorten processing time by eliminating data transfer. Wirelless image transmission is notorious.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ning as above. Ning fails to specify where gantry motor 212 is mounted, but gantry control 324 is on the gantry (figure 3), and it would have been obvious that gantry control would inherently include the motor.
